

Abstract

This invention discloses a portable electric heating cooker comprising a handle, a cover, a cooker bowl and a base, inside said base are installed heating means and control means, wherein, two or more than two joining means are provided on said
5 cooker, said joining means can be used to make said cooker into an integral and portable body when necessary. A sealing ring may be further included. With said sealing ring, said cover can be pressed on said cooker bowl tightly, so as to prevent leakage when carrying. A partition board may be installed inside said cooker bowl, so that, different kinds of food or food of different tastes may be braised or broiled in the
10 same cooker.
